**Subject:** RE: ATSDR MRLs

Melanie,

ATSDR has already changed their MRLs to be consistent with the EPA IRIS derived values. The current MRL table lists only the chronic values, the intermediate and acute have been rescinded. There is some confusion in the units as ATSDR lists the RfD correctly as mg/kg/day and the RfC as ppm. These are the same as used in our RSL tables but in different units for the RfC, we present ug/m3. For TCE 0.0004 ppm = 2 ug/m3.

I was wondering if either of you knew if ATSDR is planning on lowering their MRLs for TCE in light of the EPA tox reassessment? --Melanie
